

Boom Lift Attachments

Boom Lift Attachments - Boom Lifts are a platform lift machine that can be raised or lowered to varying heights, making this machine a functional instrument for various industrial uses. There are many different kinds of Boom Lift consisting of knuckle booms, scissor platform lifts, and aerial hoists, each operating in a different way.

Aerial lifts are most regularly utilized to transport people at snowboard lodges who are not at ease with a ski lift. These platform lifts function much like an elevator, skiers can be slowly but surely shuffled up the mountain, stopping at stations along the route until they arrive at the top. Aerial platform lifts are also utilized in construction, moving personnel securely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom jack group. They are utilized regularly by utility companies as an ideal system to permit employees to complete maintenance and repair on wires and cables that are attached to poles. Phone, cable and power companies have relied on the effectiveness of this kind of boom jack for years.

The knuckle boom jack is built for use within locations of bumpy terrain and where the need to reverse course may be required. This kind of boom lift has the capability to fit in tight spots where a scissor jack cannot fit. Working between numerous equipment in a manufacturing plant or in near proximity sandwiched between two walls, the knuckle boom additionally features a standard table outfitted with rails for security and employee safety.

The kind of boom jack needed by companies will usually depend on the nature of the work needed. Fortunately, there are suitable versions for almost any job.
